## Contents:

- Climate Change planning instruments in Peru.
- Framework for a transparency system in Peru.
- Needs and Gaps.

# Climate change planning process in Peru

## National Climate Change Strategy

**ESTRATEGIA NACIONAL**  
*ante el*  
**CAMBIO CLIMÁTICO**  
2015

- Preserve the carbon stocks and contribute to the reduction of GHG emissions.

---

- Increasing awareness and adaptive capacity against the adverse effects of climate change.

## Nationally Determined Contributions

Un país climáticamente responsable  
**ES UN PAÍS QUE CRECE**

**Contribuciones**  
**Nacionalmente**  
**Determinadas**

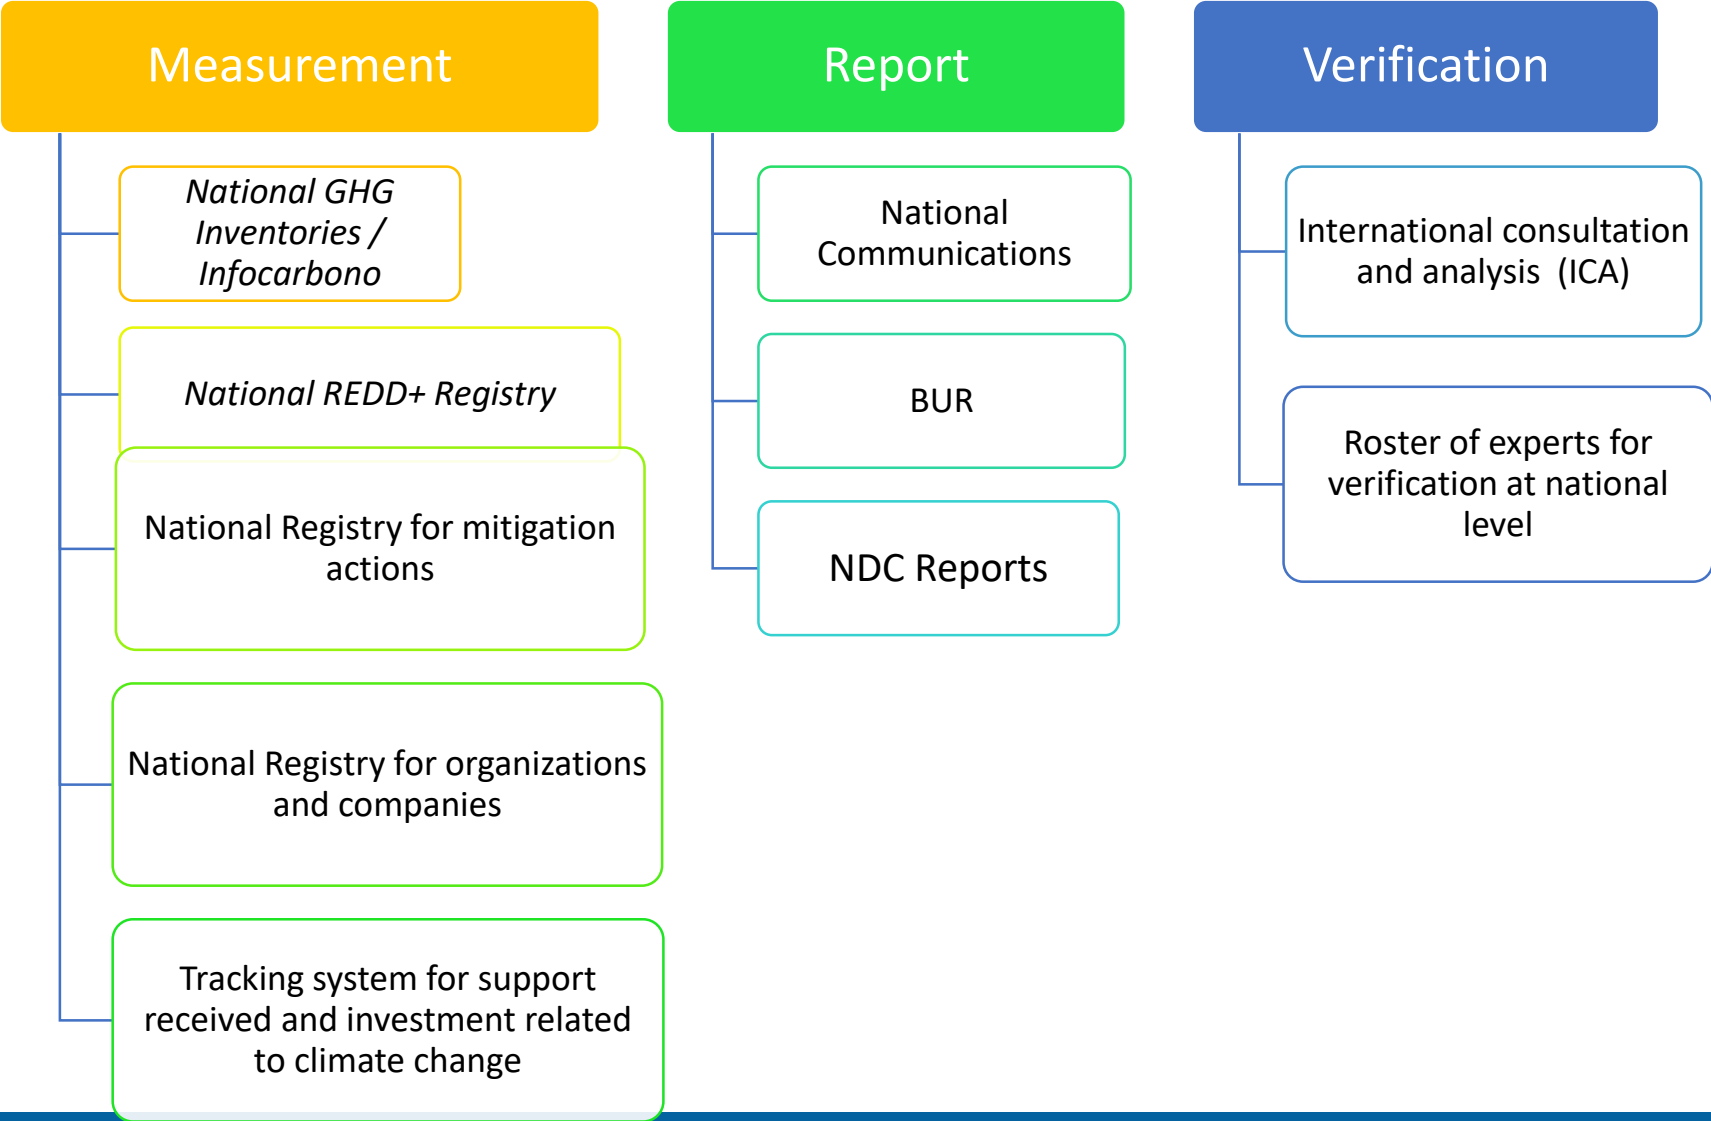

- An emission reduction goal of 20% of business as usual (BAU) GHG emission for 2030.

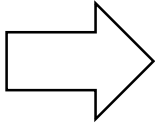

---

- Five priority sectors for adaptation actions: water resources, agriculture, fisheries, forestry and health.

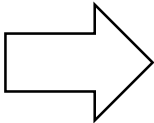

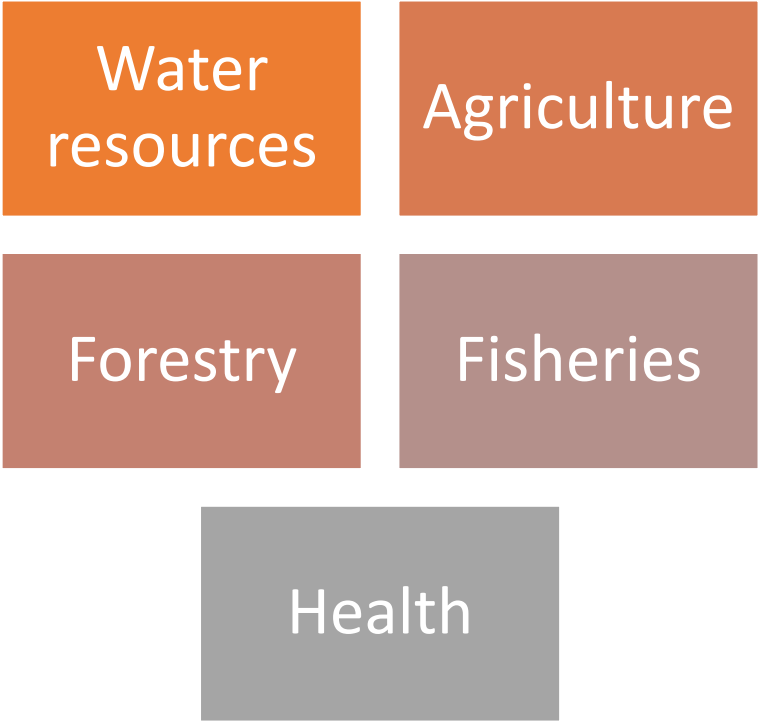

# Mitigation framework for a transparency system

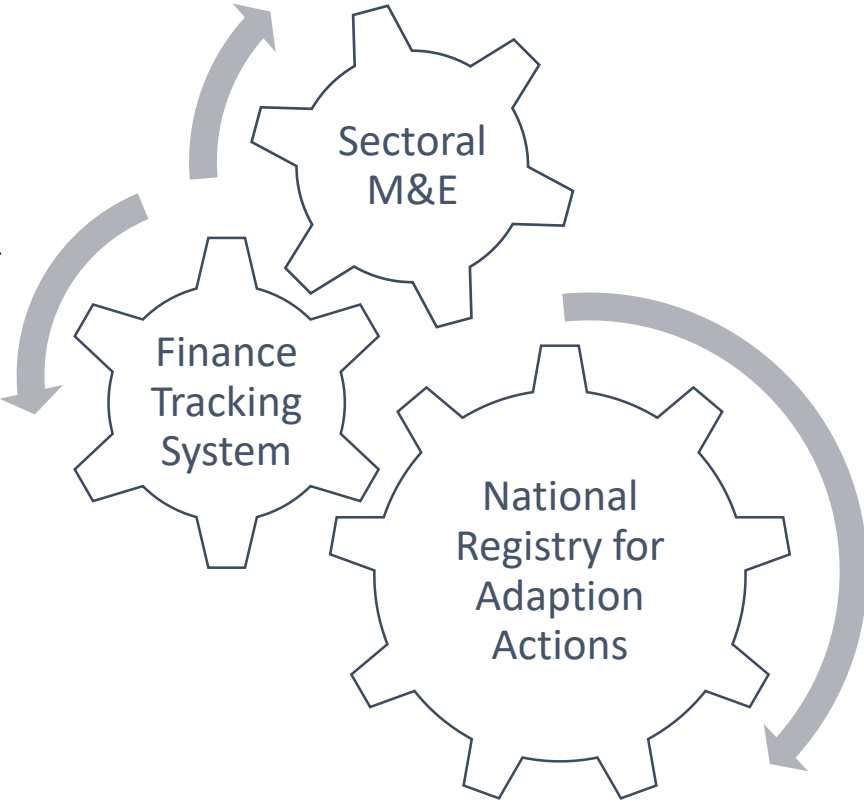

# Adaptation Framework for a transparency system

## Priority Sectors

## M&E System

## Needs and gaps

<b>M</b>	The country lacks technical and institutional capacities to provide GHG reliable emissions projections, in order to give adequate tools to national planning.
	The development of local emission factors is necessary for main emission sectors such as forestry and energy.
<b>M&amp;A</b>	There is a pending agenda on including climate change on national planning instruments.
	Peru lacks institutional capacity for quantifying and reporting national public and private investments for the implementation of Peru's NDC.
<b>A</b>	There are no institutional arrangements in place to systematize information about implementation of the adaptation component of the NDC.
	Current adaptation actions are reported partially because it is not categorized as climate change.
